## **PREFACE**

Praise and gratitude to the presence of the almighty God for His blessings and grace so that author can finish the thesis research with the title “ The factors related to risk of premarital sex behavior of adolescence in Kema Subdistrict North Minahasa”. This thesis compiled as one of the requirements to complete a bachelor degree (S1) in nursing science program, faculty of nursing De La Salle University of Manado. In completing this thesis author realize that this all cannot be separated from the help of various parties who sincerely helped to resolve this thesis. Therefore, author would like to thank to:

1. Pastor Revi R. H. M. Tanod, SS, SE, MA, Pr, as Rector of De La Salle University of Manado.
2. Dr. Indriani Yauri, MN, as Dean of the Faculty of Nursing De La Salle University of Manado, also as advisor I who has provided direction, and guidance for the author in preparing this thesis. Thanks for the good advice and valuable input.
3. Wahyuny Langelo, BSN, M.Kes, as the Head Of Study Program, Faculty of Nursing De La Salle University of Manado, also as advisor II who had guided and assisted the author in writing and finishing the thesis. Thanks for the good advice and valuable input.
4. All lecturers and staff of De La Salle University especially faculty of nurse who have provided support and direction for author.
5. The head of public health center and all the staff who has given permission conducted the research in the working area of the heath center.

6. Sincere thanks to my parents, and brothers that always pray, encourage, love, spirit, and motivation during finishing the thesis.
7. For all the friends generation 2013 who cannot be mention one by one who have jointly struggled and helped each other. Thank you for everything.
8. And all other person who cannot be said one by one who has helped the author until finishing process.

The end of the word hopefully this thesis can be useful in the development of science in the field of nursing, especially gives a positive impact in general to a reader and to the author. Finally author realizes that this thesis is still far from being perfect. For that constructive criticism and suggestion is to be expected from the reader for the perfection of the next writing.

## Abstrak

**Latar belakang :** masalah remaja yang sering terjadi adalah kebiasaan beresiko seks pranikah. Hal ini dikarenakan remaja berada pada masa transisi yang ingin mengetahui atau mencoba segala sesuatu. Berdasarkan data dari WHO (World Health Organization) 2014 menunjukkan rata-rata tingkat kelahiran global pada remaja antara 15-19 tahun adalah 49 per 1000 perempuan dengan tertinggi pada Sub Saharan. data dari puskesmas Kema pada Januari 2017 terdapat 9 orang remaja putri yang sedang hamil. Hal ini menunjukkan bahwa remaja Kema beresiko terhadap kebiasaan seks pranikah.

**Tujuan :** Penelitian ini bertujuan untuk mengetahui faktor-faktor yang berhubungan dengan resiko kebiasaan seks pranikah remaja di Kecamatan Kema Minahasa Utara.

**Metode :** Metode dalam penelitian ini adalah deskriptif analitik/ kuantitatif dengan jumlah sampel 69 remaja Kema dari 116 populasi yang di ambil dengan teknik *convenience sampling*. Pengumpulan data menggunakan kuesioner.

**Hasil penelitian :** Analisis menggunakan uji *chi-square* dengan nilai signifikan  $<0.05$ . adapun faktor-faktornya yaitu pengetahuan *fisher test* nilai  $p= 0.18$  atau  $p> 0.05$ , tekanan teman sebaya *chi-square test* nilai  $p= 0.030$  atau  $p< 0.05$ , dan status tempat tinggal nilai  $p= 0.54$  atau  $p> 0.05$ .

**Kesimpulan :** Terdapat hubungan yang signifikan pada tekanan teman sebaya terhadap resiko kebiasaan seks pranikah remaja. sedangkan faktor berupa pengetahuan dan status tempat tinggal tidak memiliki hubungan yang signifikan terhadap resiko kebiasaan seks pranikah remaja.

**Kata Kunci :** Resiko seks pranikah remaja, pengetahuan, tekanan teman sebaya, status tempat tinggal.

**Abstract**

**Background:** One of the common problems among adolescents is premarital sex. This is because they are in a transition period and want to know or try everything. Based on the data from WHO (World Health Organization) in 2014, it shows that the average global birth rate in the age of 15 – 19 is 49 per 1000 women with the highest in Sub Saharan area. The data from Kema Public Health Center in January 2017 shows that there were 9 young women who were pregnant. This shows that the adolescents in Kema are at risk for premarital sex.

**Objective:** this study aim to know the relation between the factors and risk of premarital sex behavior of adolescence in Kema Subdistrict, North Minahasa.

**Methods:** This research used descriptive analytic/quantitative method with the total sample of 69 adolescents from the population of 116. The samples were taken by convenience sampling technique. The data was collected using questionnaires.

**Results:** The data was analyzed using chi-square test with the significant value <0.05. There were several factors found; first, knowledge, the fisher test  $p = 0.18$  or  $p > 0.05$ . Second, peer pressure, chi-square test  $p = 0.030$  or  $p < 0.05$ . And third, residence status,  $p = 0.54$  or  $p > 0.05$ .

**Conclusion:** There is a significant relationship between peer pressures and the risk of premarital sex behavior. While the knowledge and status of residence factors do not have a significant relationship to the risk of premarital sex behavior of adolescents.

**Keywords:** Risk of pre-marital sex of adolescence, knowledge, peer pressure, residence status.

**Literature:** 10 books, 10 journals, 16 websites.
