Abstrak

Latar Belakang : Masa pandemi virus covid-19 membuat masyarakat luas merasakan ketidaknyamanan, terlebih jumlah kasus yang terus meningkat membuat masyarakat khawatir dengan penyebaran virus tersebut. Respon koping orang-orang atau keluarga yang terkena covid-19 khawatir tentang pandangan orang sekitar terhadap mereka, takut akan diasingkan ataupun memberi ucapan yang tidak baik, dengan adanya dukungan sosial dari masyarakat dapat membantu adaptasi koping yang baik. **Tujuan penelitian:** Penelitian ini bertujuan untuk mengetahui pengaruh dukungan sosial masyarakat terhadap koping pada keluarga yang terkena covid-19 di Perumahan Minanga Indah Kecamatan Malalayang.

Metode penelitian: Metode penelitian yang dilakukan yaitu metode penelitian kuantitatif dengan desain penelitian deskriptif korelasional dengan teknik pengambilan sampel yaitu *convenience sampling*. Responden yang bersedia sebanyak 30 kepala keluarga. Menggunakan uji statistik korelasi pearson $p < 0.05$.

Hasil penelitian: Hasil pada penelitian ini menunjukkan nilai $p = 0,062 > 0,05$ berarti H_a ditolak dan H_o diterima.

Kesimpulan: Dari hasil penelitian yang didapatkan bahwa tidak ada hubungan antara pengaruh dukungan sosial masyarakat dengan koping keluarga yang terkena covid-19 di Perumahan Minanga Indah Kecamatan Malalayang.

Kata kunci: Dukungan Sosial Masyarakat, Koping, Keluarga, Covid-19.

Abstract

Background: The COVID-19 pandemic has caused discomfort to the people, especially the increasing number of cases made people worried about the spread of the virus. The coping response of people or families affected by COVID-19 showed that they are worried about the views of those around them, afraid of being ostracized or being bad-talked. The social support from the community can help to adapt good coping. **Research objectives:** This study aimed to determine the effect of community social support on coping to the families affected by COVID-19 in Minanga Indah Housing, Malalayang Sub-District.

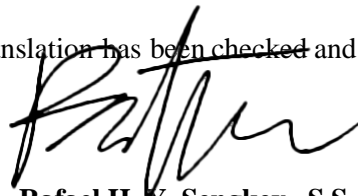

Method: The research method is a quantitative research method with a descriptive correlational research design using the convenience sampling method. The number of respondents was 30 families. The analysis used the Pearson Correlation statistical test $p < 0.05$.

Results: The results showed the value of $p = 0.062 > 0.05$ which means H_a was rejected and H_o was accepted.

Conclusion: From the results of the study, it was found that there was no relationship between the influence of community social support and the coping of families affected by COVID-19 in Minanga Indah Housing, Malalayang Sub-District.

Keywords: Community Social Support, Coping, Family, Covid-19. **Bibliography:** 1 book and 41 journals
