Abstrak

Latar Belakang: Kurangnya dukungan keluarga merupakan salah satu penyebab penurunan kualitas hidup penderita covid-19. Namun, masih kurangnya partisipasi dari keluarga untuk memberikan dukungan terutama di Kec. Kawangkoan. Hal ini dapat menimbulkan berbagai persoalan pada penderita covid-19 sehingga berdampak pada penurunan kualitas hidup.

Tujuan: Penelitian ini bertujuan untuk mengetahui apakah ada hubungan yang signifikan antara dukungan keluarga dengan kualitas hidup penderita covid-19 di Wilayah Kerja Puskesmas Kawangkoan.

Metode: Jenis penelitian yang dilakukan menggunakan rancangan penelitian deskriptif kuantitatif dengan pendekatan survei analitik dan memakai desain *cross sectional*. Populasi dari penelitian ini adalah semua penderita covid-19 di Wilayah Kerja Puskesmas Kawangkoan. Jumlah sampel sebanyak 33 orang. Instrumen yang digunakan adalah kuesioner dukungan keluarga dengan 20 pernyataan dan kuesioner kualitas hidup dengan 26 pertanyaan.

Hasil: Diketahui terdapat hubungan yang signifikan antara hubungan dukungan keluarga dengan kualitas hidup penderita covid-19 di Wilayah Kerja Puskesmas Kawangkoan dengan (p value 0.000)

Kesimpulan: adanya hubungan yang signifikan antara dukungan keluarga dengan kualitas hidup penderita covid-19 di Wilayah Kerja Puskesmas Kawangkoan. Hal ini dipengaruhi oleh kurangnya dukungan keluarga sehingga dapat menurunkan kualitas hidup penderita covid-19.

Abstract

Background: Lack of family support is one of the causes of the decline in the quality of life of people with COVID-19. However, there is still a lack of participation from families to provide support, especially in Kec. Kawangkoan. This can cause various problems for people with COVID-19, which will reduce the quality of life.

Aim: This study aims to determine whether there is a significant relationship between family support and the quality of life of COVID-19 sufferers in the Kawangkoan Health Center Work Area.

Method: This type of research was carried out using a quantitative descriptive research design with an analytical survey approach and using a cross sectional design. The population of this study were all patients with COVID-19 in the Kawangkoan Health Center Working Area. The number of samples as many as 33 people. The instrument used was a family support questionnaire with 20 statements and a quality of life questionnaire with 26 questions.

Outcome: It is known that there is a significant relationship between the relationship between family support and the quality of life of patients with COVID-19 in the Kawangkoan Health Center Working Area with (p value 0.000)

Conclusion: there is a significant relationship between family support and the quality of life of COVID-19 sufferers in the Kawangkoan Health Center Work Area. This is influenced by the lack of family support so that it can reduce the quality of life of COVID-19 sufferers.
